

# Closing thoughts

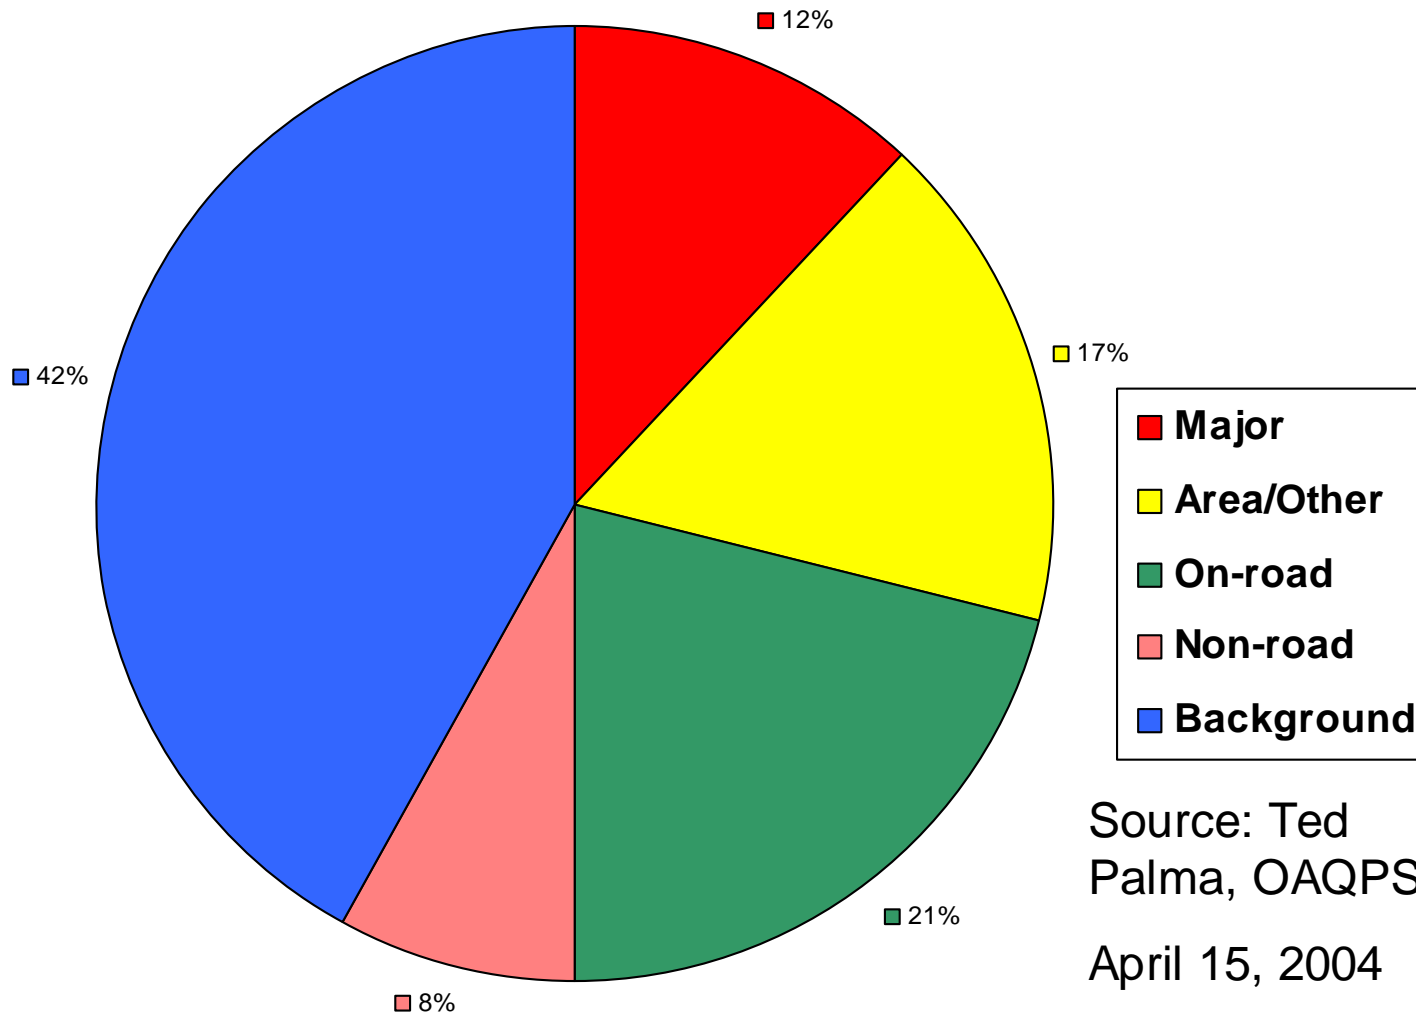

John Dege, DuPont

Representing the chemical  
industry's Acrylonitrile Group

# Ambient vs. Toxics Program

- Investigation of health effects
- Emissions inventory
- Ambient monitoring and modeling
- System to determine which emissions to control.
- Federal/state/local coordination

# Summary

- Carefully research the health effects
- Spend the effort to determine what is being emitted and by whom.
- Determine fate and transport and who is really at risk.
- Determine which types of sources are the real risk problems and change our programs accordingly
- Better integrate our federal, state, and local air toxics programs.
